

Your SCU Field Guide

Patterns of Human-AI Collaboration

theaikitchen.org/29

Scan or type the address for full copyable prompts, public source links, and the prepared fictional example.

0 Ready to begin?

Open the **ChatGPT desktop app** and confirm you can start a **Work task**, following the emailed setup instructions. Show your readiness when asked. If stuck, ask for help or pair with a classmate.

Use non-sensitive interests you choose to share, or fictional Alex on page 2. Use public sources and manual availability. Do not connect SCU email, calendars, or other accounts.

1 Try a first pass with little context

Choose **New chat > Temporary > Unpersonalized**. Use your own one-line profile, or this example:

"I'm a first-year psychology student interested in wellbeing and community service. Find up to three SCU clubs, events, or faculty that might interest me for October 8-21, 2026. You may browse public sources; include links. Do not use connected accounts or private files."

Check in: What did it assume? What does it still need to know? Keep this first pass for comparison.

2 Start with a fuzzy idea in Voice

Start **Voice** for a live conversation, rather than the microphone that only dictates text. Use headphones or speak quietly. A partner or a typed conversation works too.

"I'm going to think out loud about what I might explore at SCU. My ideas may be scattered. Help me make sense of them through your reactions, useful questions, and possible directions. I'll react and we'll refine together. Don't research or build yet."

Share a messy mix of interests, ideas, examples, constraints, and competing directions. Listen, react, correct misunderstandings, and add context. Take turns for a few minutes.

3 Read and correct your brief

"Turn our conversation into a short paragraph: my interests, goal, preferences, constraints, and open questions. Separate what I told you from your suggestions. Wait while I read and correct it."

Check in: Correct an assumption or add a missing detail. **Copy your reviewed brief before leaving Temporary chat.**

My interests, a correction, or something I still want to explore:

Build, check, revise

theaikitchen.org/29

Use the website for the full request and examples. These shorter prompts also work as a starting point.

4 Give Work context and a goal

Start a **new normal Work task**. Paste your reviewed brief and a few available time windows you choose to share. Then use this request, or copy the full version from the website:

"Use only my pasted brief, supplied availability, and public sources. Do not read other local files or connect accounts. You may inspect the HTML you create. Do not send messages, sign up, book anything, or create calendar events.

Research public SCU and official organization sources for about three strong matches: an event during October 8-21, 2026, plus communities or research directions. Link each source, explain why it fits, and suggest a concrete next step. Distinguish verified facts, interpretation, and unknowns. Compare verified event times with my supplied availability.

Create one accessible, self-contained HTML page titled Your SCU Field Guide, with useful visuals and source links. Label any fictional profile and availability. Offer a Google Calendar draft link only when the event title, date, exact start and end, and timezone are verified. Save the HTML, explain how to open it locally, and tell me what you checked. Do not publish."

Check in: Launch the task. While it works, look at the prepared example on the website. Then open your own HTML page.

Fictional fallback: Alex

Invented profile: First-year Communication student; enjoys storytelling and creative projects; curious about technology and people; wants to contribute to the community; little coding experience. Goal: one upcoming event and two longer-term directions, with beginner-friendly next steps.

Invented availability: Friday, October 9, 12:30-3:30 p.m.; Tuesday, October 13, 4-6 p.m. Pacific. These are example windows, not a calendar read.

5 Check before you trust

Check **one source fact, one availability claim, and one link**. Mark missing times unknown. Use the prepared event on the website if needed.

Partner check-in: Share one sentence each: "I liked...", "I wondered...", and "I'd try..."

6 Make one specific revision

"Change [specific content or behavior] because [reason]. Use [my feedback or this public source]. Preserve what works. Inspect the change and summarize what changed and what is still uncertain. Keep the same context and source restrictions."

Reopen the page and inspect the revision yourself. What did the conversation clarify? How did the recommendations differ from the first pass? What did you still have to judge?

One direction I want to try, or one judgment AI could not make for me:
